Dear Hiring Manager,

I am writing to apply for the mobile developer position in your team. I am a computer engineer with seven years of experience in native Android and iOS development, and I currently lead the mobile work on a retail app at Example Apps Ltd. that is used daily in stores and at home.

In my current role I build features in Kotlin and Swift, maintain the offline mode and push notifications, and migrated a large part of the Android interface from XML layouts to Jetpack Compose without interrupting regular releases. I also set up release automation for both app stores with Fastlane and GitHub Actions, which turned a half-day manual process into a routine step. I care about accessibility and test the most important flows with screen readers before every release.

Before that, I spent three years at Sample Studio Ltd. working on client apps in Java and Kotlin, where I learned to estimate work honestly, to communicate with clients and to write UI tests for the flows that matter most. In my free time I maintain an open-source offline hiking app and mentor children at a local code club, which keeps me practising how to explain technical ideas simply.

I enjoy working in teams where code review is a conversation rather than a gate. I try to keep pull requests small, explain the reasoning behind a change and leave the code a little clearer than I found it. When a release goes wrong, I prefer to look for the missing check in the process instead of a person to blame, and to add that check so the same problem does not return.

I would be glad to bring this experience to your products and to learn from your team. Thank you for considering my application; I look forward to hearing from you.

Example City, 15 January 2026

Sincerely,

Jane Doe
